

Agent Assist

Tool designed to enhance the performance and efficiency of call centre agents by providing real-time support during customer interactions.

Why Agent Assist?

As companies increase their customer base they also need to take care of customer issues, problems, support, training and onboarding. That's why they set up more call centres and hire support staff who can help users resolve their problems.

The customer interaction with an agent should be in real-time as the person is mostly on-call or on messaging platforms. Sometimes it is very hard for agents to suggest How-to processes, give a solution, or explain product details. And that's where these problems start.

Long Handling Times

Agents spend too much time on each call, leading to longer wait times for customers. Which demands hiring more Agents, which is again not the right solution for businesses.

High Error Rates

There is a significant risk of agents providing incorrect details to customers, leading to misinformation and misselling, causing damaged brand image.

Low First Call Resolution (FCR) Rates

Due to insufficient information about the customer's history, and product knowledge, sometimes the agent cannot resolve the issue within the first call.

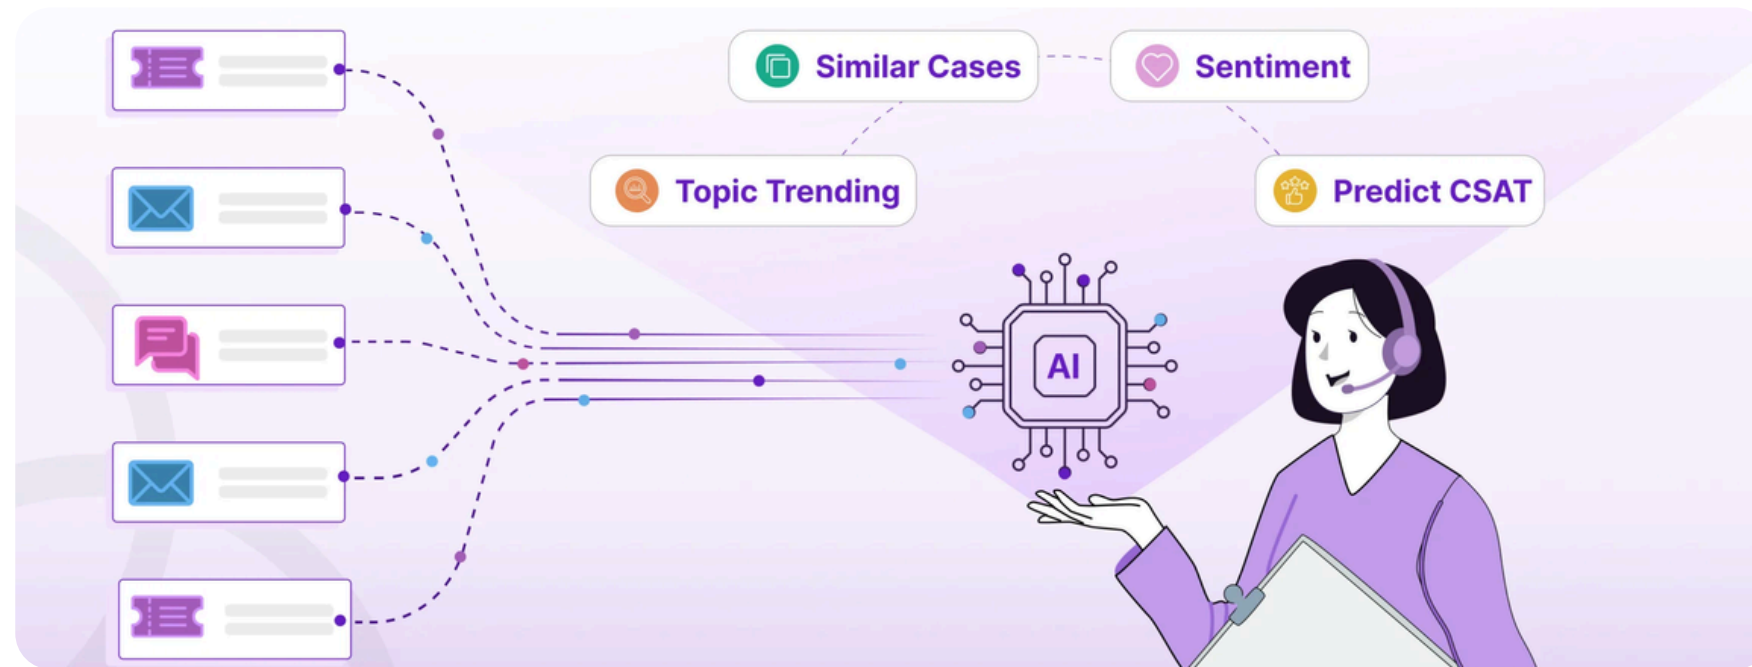

Addressing Product Complexity

Complex products can be challenging for agents to explain, especially during live interactions. It is essential to ensure that agents fully understand and can effectively communicate.

What is Agent Assist?

Technology that provides real-time support and guidance to call centre agents using AI and machine learning.

Real-Time Data Retrieval

Access customer info and previous interactions quickly from existing records, past purchases and support details and provide to agent as quick summary.

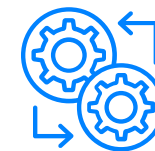

AI-Powered Suggestions

Offers suggested responses and solutions based on understanding customer queries, issues from past interactions, SOP and compliance.

Automated Task Handling

Assists with routine tasks like filling out forms and updating records through taking automated notes and summaries.

Integration Capabilities

Seamlessly integrates with existing contact center systems, workflows, CRM to collect and provide useful data.

Dynamic Scripting

Offers adaptable scripts that change based on the conversation flow which helps agents interact better.

Knowledge Base Integration

Provides access to a comprehensive database of information from knowledgebase integrations of products enabling quick response to customer queries.

Sentiment Analysis

Monitors the tone and sentiment of customer conversations through Natural Language Processing to effectively interact with the customer.

How Agent Assist Helps?

Reduces AHT (Average Handling Time)

AI suggestions and summaries help reduce the average handling time.

Improved Customer Satisfaction

By reducing errors during customer interaction, businesses can improve customer satisfaction by faster issue resolution.

Increased Agent Productivity

With easy information access and quick summaries, agents can be more proactive in handling more customers effectively.

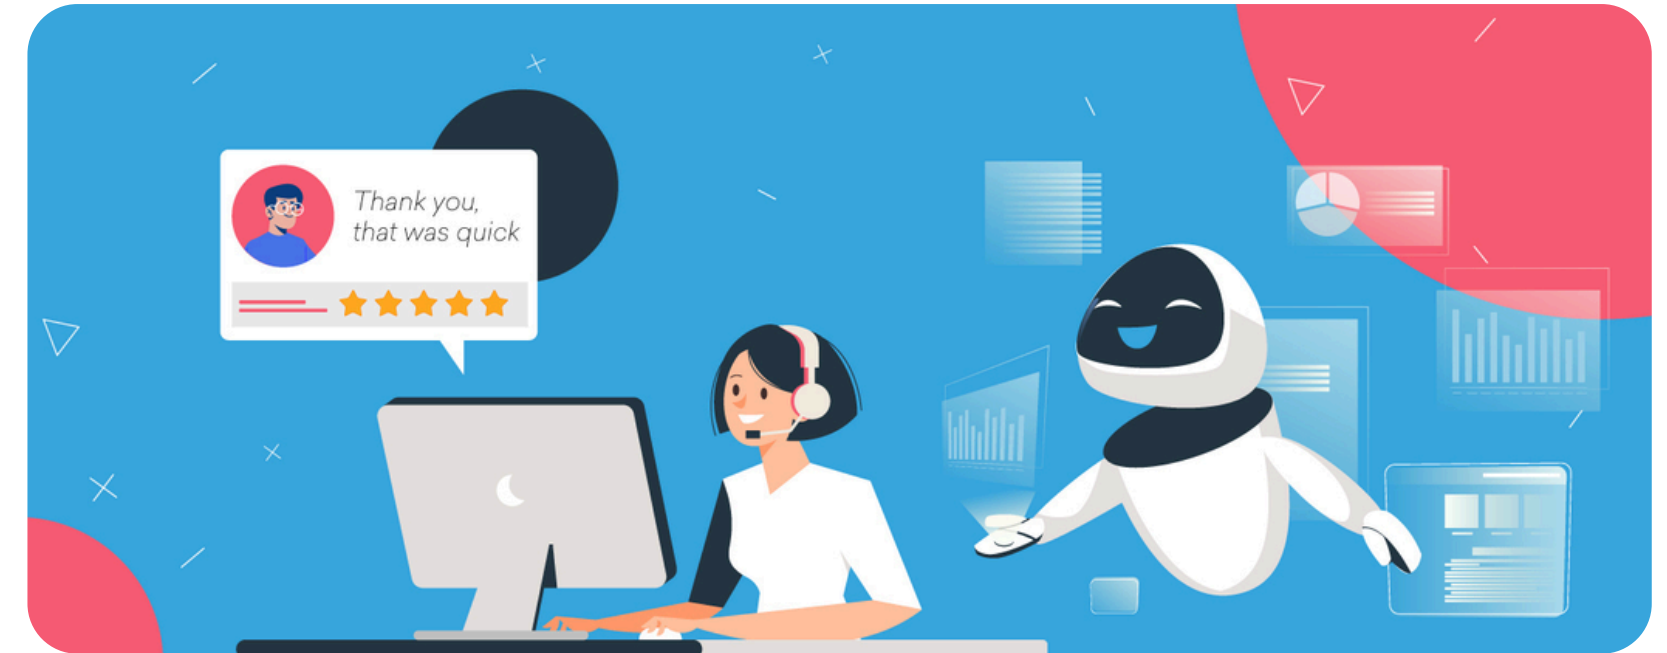

Improved First Call Resolution (FCR)

Higher resolution rates on the first call through better support with knowledge base summaries and interactive scripts.

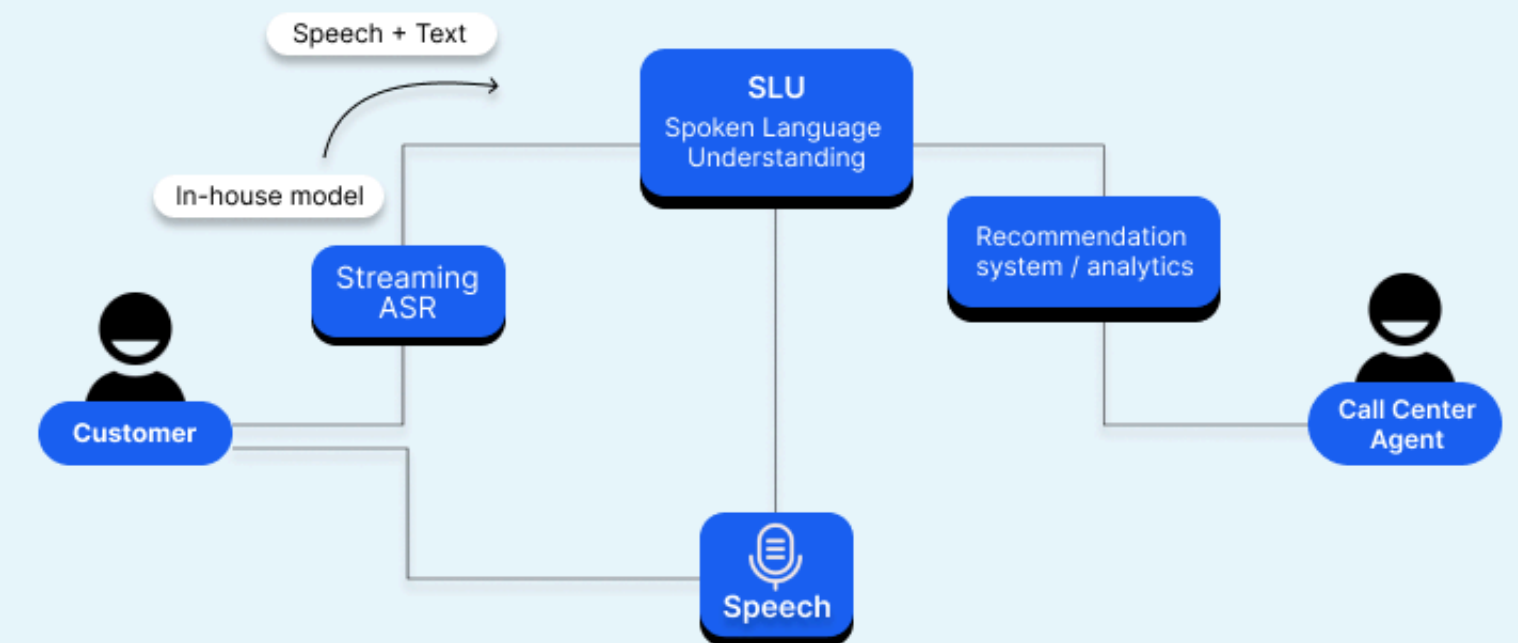

Ensuring Compliance & Monitoring

With a suggested checklist, next actions businesses can ensure compliance during customer interactions as it is vital to avoid legal issues and maintain accuracy.

How does real-time agent assist work?

Proactive Response

Quickly resolve customer issues by proactively providing agents with the **next best action** recommendations for each stage of the conversation.

Automatic knowledge retrieval

Generative AI uses trusted data stored in the knowledge base to deliver precise answers—not articles.

Real-time call transcription

Transcribe calls in real-time using advanced speech-to-text and natural language processing technology.

Smart Scripts

Agents get instant step-by-step guidance during the call on how to resolve a query quickly and correctly.

In-app automation

Automate manual tasks and capture customer information inside any application, without leaving Talkdesk Workspace.

Pricing

\$85 to \$145 per user/month

Customers

IBM, Fujitsu, Canon

G2 ratings

2,212 4.4 out of 5 stars

From users

"Reliable, Highly Configurable and Powerful"

"What could improve with Talkdesk is the support."

Interaction history

Whether it's a call from a virtual agent or a human agent, quickly bring an agent up to speed with automated access to the interaction history.

AI Trainer™

Allow non-technical customer service staff to easily apply their practical expertise to continuously improve AI models that are powering automation in the contact center.

Empower agents in real time with AI-powered Agent Copilot

Real-time knowledge automation

Following along with all customer interactions and presenting critical relevant knowledge to agents at the moment of need.

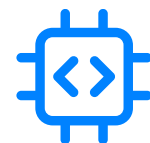

Next best action guidance

Copilot supports providing custom scripting, surfacing the right tool or form at the moment and suggesting what action the agent should take next as conversations progress.

Auto-summarization using generative AI

Summarizes history & records of a customer interaction to quickly assist agent during the call

Embedded knowledge

Genesys Knowledge is an intuitive workbench that uses AI to create, structure, analyze and optimize your knowledge base.

Wrap-up code prediction

Post-interaction tasks with AI-assisted automation, such as automatic summarization built using generative AI

Pricing

Starts at \$40/user/month

G2 ratings

1,351, 4.3 out of 5

Customers

Electrolux, Narayan Helalth, Schenider Elecric

From users

"The Ease of Use, Genesys is with its user-friendly interface allows ours agents to naviagte with ease"

"The reporting package in Genesys is very lacking by default."

Agent feedback

Copilot allows agents to provide quick or detailed feedback on AI-assisted suggestions to optimize performance.

Omnichannel interactions

Work across all customer support channels seamlessly. Agent Copilot integrates with digital and voice conversations

Real-time intelligence for excellent live support

Contextual handover

Agent Copilot retrieves relevant CRM data, query summaries and interaction history.

Real-time knowledge lookup

Automatically fetches knowledge articles and answers that your agents need as the conversation progresses.

Emotional intelligence

Uses sentiment analysis to take timely de-escalation measures or capture positive reviews.

Speak any language

Agent Copilot facilitates bidirectional, real-time translation during live support – to help you localize customer service at scale.

Drive customer-centric upsells

Listens to customers' clues and combines them with CRM data at hand to recommend tailored offers that suit them best.

COGNIGY

Pricing

Starts at \$2500/month

G2 ratings

12, 4.7 out of 5

Customers

Toyota, Luftnasa, Fromtier Airlines, Bosch

From users

"Cognigy as a great library of integrations to work with out of the box"

"Lack of ready-made templates to accelerate the development of virtual assistants."

Agent feedback

Copilot allows them to provide quick or detailed feedback on AI-assisted suggestions to optimize performance.

Wrap-up Assist

From live transcription and call summary to feedback collection, customer record updates.

Empower your agents to be more productive with AI

Real-Time Monitoring

Supervisors can oversee live interactions and intervene to ensure high-quality service and compliance.

Automate After-Call Work

Real-time transcription and custom call summarization that reduces contact handle time and after-call work (ACW).

Dynamic Scripting

Adapts conversation flow based on real-time data and customer responses.

AI Summaries outputs with GenAI Studio

AI Summaries gives you the ability to easily optimize the output of your call summaries based on your business need.

Omnichannel interactions

Work across all customer support channels seamlessly. Agent Assist integrates with digital and voice conversations

Pricing

Starts \$175 Monthly

G2 ratings

392, 4.0 out of 5

Customers

Alaska Airlines, PING, File Dynamics

From users

"Automation that Five9 offers has been beneficial for saving time and manual labour for our employees."

"It does not have a user-friendly interface for setting up call transferring."

Robust integration capabilities

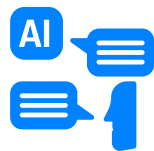

Making it ideal for large enterprises. Its advanced analytics and AI tools provide deep insights into customer interactions.

Real-time Guidance and Reminders

Based on the conversation between an agent and customer, Agent Assist provides real-time guidance with automatic reminders during calls.

Drive Winning Conversations, Maximize Satisfaction, Retention, and Revenue

AI-assisted Knowledge Base

Offers instant access to information through a simple phrase or keyword searches.

Generative AI-powered Ask AI

Capable of sourcing information from diverse sources, such as LMS, product details or external data repositories.

Help agents adhere to script parameters

A visual checklist ensures every interaction aligns with the highest standards of communication and service.

Prompt suggestions

Agents receive on-call scripts, compliance violations, and speech adjustments. Highlighted suggestions draw agents' attention and help them better handle customer queries

Multilanguage assist

Easily distinguish the customer's accent or revisit a previously spoken statement.

Pricing Starts \$\$\$ Monthly

G2 ratings
506, 4.7 out of 5

Customers

Alaska Airlines, PING, File Dynamics

From users

It gives us all the required information about our quality score."
"Slight delay in the search function's speed."

Sentiment tracking & Emotion Detection

Identifies customer sentiments to tailor responses and improve interactions.

Real-time Guidance

The prompts include a step-by-step flow, hints and a list of options to investigate. Inserts more topics based on the agent's past call performance.

Concs of Agent Assist

Over-Reliant Agents

- These tools may unintentionally limit an agent's learning and development. If agents become overly reliant on these tools for immediate answers, they might not develop the necessary problem-solving skills to handle complex situations independently.

Data Privacy Concerns

- As real-time agent assist tools to process customer interactions, there can be data privacy concerns if not handled correctly. While it might not be against any data regulations, some customers may feel uncomfortable knowing their conversation is being analyzed by an AI tool.

Integration Challenges

- Though designed to be user-friendly, real-time agent assist tools often require extensive customization to fit contact centre's specific workflows and software.

Final Thought

- Agent Assist is based on three key factors – **Artificial Intelligence, NLP & Integrations with other systems** like CRM, Knowledge Base, Call Center Application
- **Human intervention is needed along with AI.** Some of the products have Human Suggestion features like AI Trainer, which takes feedback from Agents. This will help AI to learn according to human tone.
- **Agent Assist is an add-on to call centre applications** and is mostly useful for enterprise-level businesses since it requires multiple integrations within multiple tools.
- There is a **high growth opportunity in building agent assistance**. The reason is that, even though there are IVR, knowledge base and chatbot options available to users to get help, users still prefer to get on a call, talk to a human who can understand like a human and resolve their queries.
- Agent Assist is a **balanced combination of automation and human touch**.
