Doctor Appointment

5000+ Doctors registered on the platform
24x7 Online consultation with Eka multi-specialist doctor
Tracking of doctor visits & medical journey
Digital prescriptions

Health Assessments

Questionary based Health assessments to get basic health awareness

Health Profile

An automated health profile from your medical data

Name: Vaibhav Arora

Age: 36 years

Occupations: SDE

Vaibhav suffers from diabetes for the last 6 months. With an early diagnosis, he is hoping to get better treatments and get better health.

He needs to visit the doctor every month for regular checkups and some lab tests have to be done. Every time while visiting the doctor he needs to carry out previous lab tests, and reports. He is unable to maintain the reports and prescriptions given.

Most of the time he forgets to visit the doctor. Unless he gets the lab test done and visits the doctor for consultation he is not able to understand his health status.

Why do we need to store medical data digitally?

Problems:

- All physical reports like medical tests, diagnoses, medicine prescriptions, etc are hard things to maintain.
- Sharing medical records with doctors, and healthcare professionals become hectic.
- For government schemes, health insurance registrations/claims collecting the medical records on the time becomes frustrating.
- Maintaining health records of all families in times like Covid-19 is an essential thing.
- Unable to track medical data – cannot able to view health progress

Current Solutions

Taking snapshots of reports and keeping them in a mobile gallery, or drive. etc.

Sharing reports on WhatsApp, email, etc.

Noting down health status on chart/paper

User Person

Customer Journey

Metrics

Wow, it seems like a complete healthcare app

Wait, I just entered wrong number by mistake.

Why my personal details. DOB? Can't I skip this part?

Too many steps, when will this complete?

Why it can't be allowed in one go?

Initial screen clearly describes the app purpose

Option to change number

Clear reasoning of why the permissions required along with NO option.

Email login absent

Deferred login could be an option so that user can explore the app first.

Progress indicator should be given to understand process length.

Finally! It looks good!

Home page is well managed with all features highlighted.

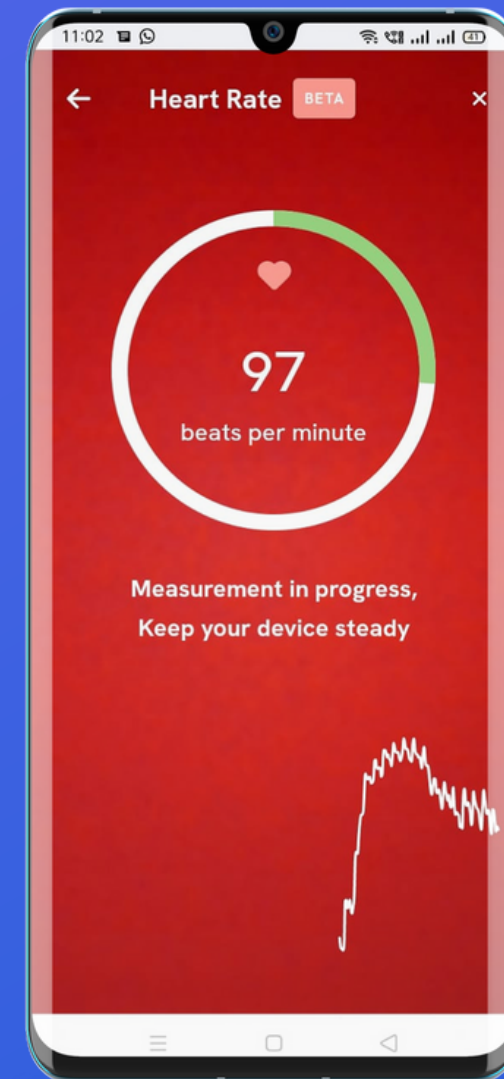

Two options for Profile.

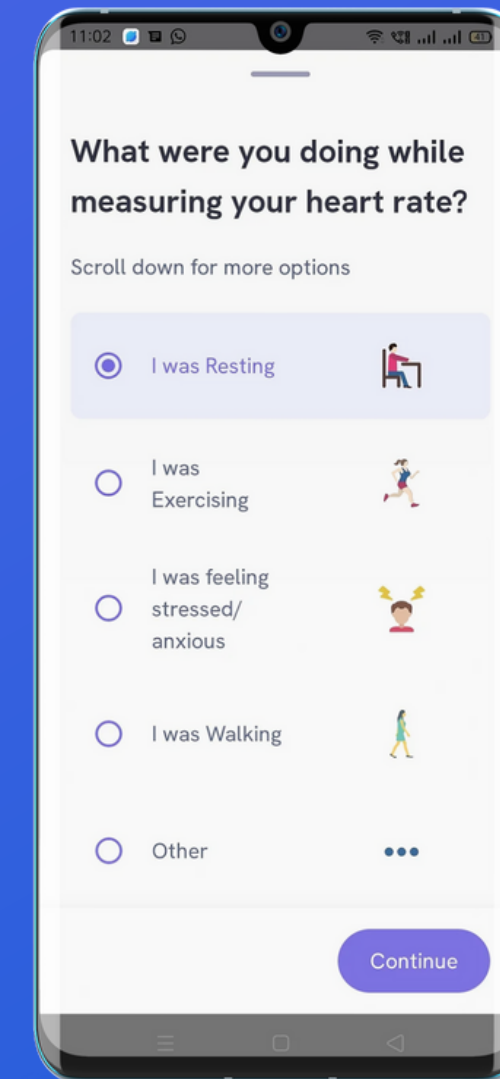

How can it measure my heart rate using mobile camera?

Proper instructions for user to take action.

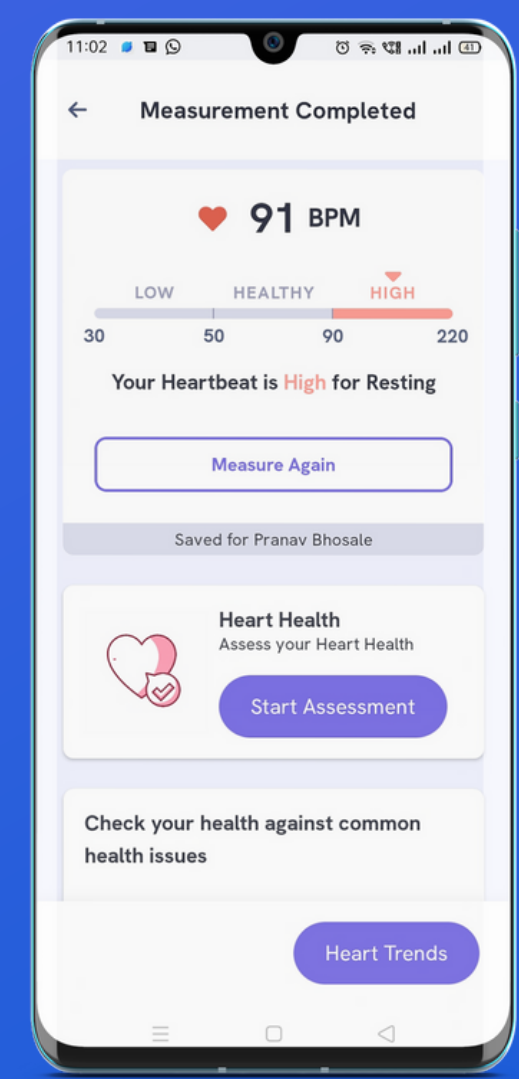

What an amazing feature is this!
Why should I use my fitness watch to check heart rate now!

Innovative feature creates Aha! moment for users.

OK, so I was resting!

Ohh! My heart rate is high

Advanced options to take Heart Health Assessment.

Revenue Model

Doctor Subscriptions:

Currently, Eka Care works on a subscription-based model to generate revenue. It sells subscriptions to doctors to allow them to communicate with their patients and store their records digitally on the platform.
