

Product Requirements Document

Product: Freight Tiger

Feature: Feedback/Suggestion System

Goal: To properly get user feedback from users which can be documented and taken into consideration to improve user experience.

Users: Logged-in user - Shipper & Transporter

Problems:

1. As a B2B SaaS product, there are many levels of users involved. Getting feedback from each level of users can be a difficult task as mostly decision-makers are involved in suggesting improvements.
2. End Users are unable to share feedback regarding their product experience of Freight Tiger online.
3. Currently, there is no proper documentation of user feedback is maintained, and thus feedback is lost.
4. The current process is manual where feedback is received from the operations team working with the clients.
5. Users don't have any visibility over the status of the feedback shared by them.

Assumptions:

1. Product users have basic knowledge of using computers.
2. Logged users have their Name, Organization Name, email ID and phone number already added to the system.
3. Product users can submit forms like Google Forms.
4. The operations team at Freight Tiger works with users for training & support.

Feedback Cycle:

- 1. Getting feedback from the user**
 - a. Through a Feedback System
 - b. Through operations team
 - c. Documenting the feedback
- 2. Categorize the feedback**
 - a. Segregating feedback into different types like Product Issues, Feature Requests, etc.
 - b. Sharing respective feedback with the dedicated team and Product Manager
- 3. Prioritizing feedback**
 - a. Respective teams will prioritization feedback based on some framework
 - b. The product team can connect with the user for more detailed feedback or user interview
 - c. Working on feedback and delivering it to the product
- 4. Following up with the user**

- a. Sharing release notes, and product training for a new feature launch
- b. Understanding whether the users are satisfied with the new change required by them

Solution:

1. Creating an integrated Feedback System within Freight Tiger product for users to submit their feedback.
2. Creating an Internal dashboard to store and view received feedback.
3. Sharing the feedback automatically with the respective teams eg. Tech, Product, and Operations for improvements in current offerings.

Features:

1. Feedback Submission Form
2. Internal Feedback Collection Portal available for Freight Tiger only
3. Feedback Notifications to respective teams

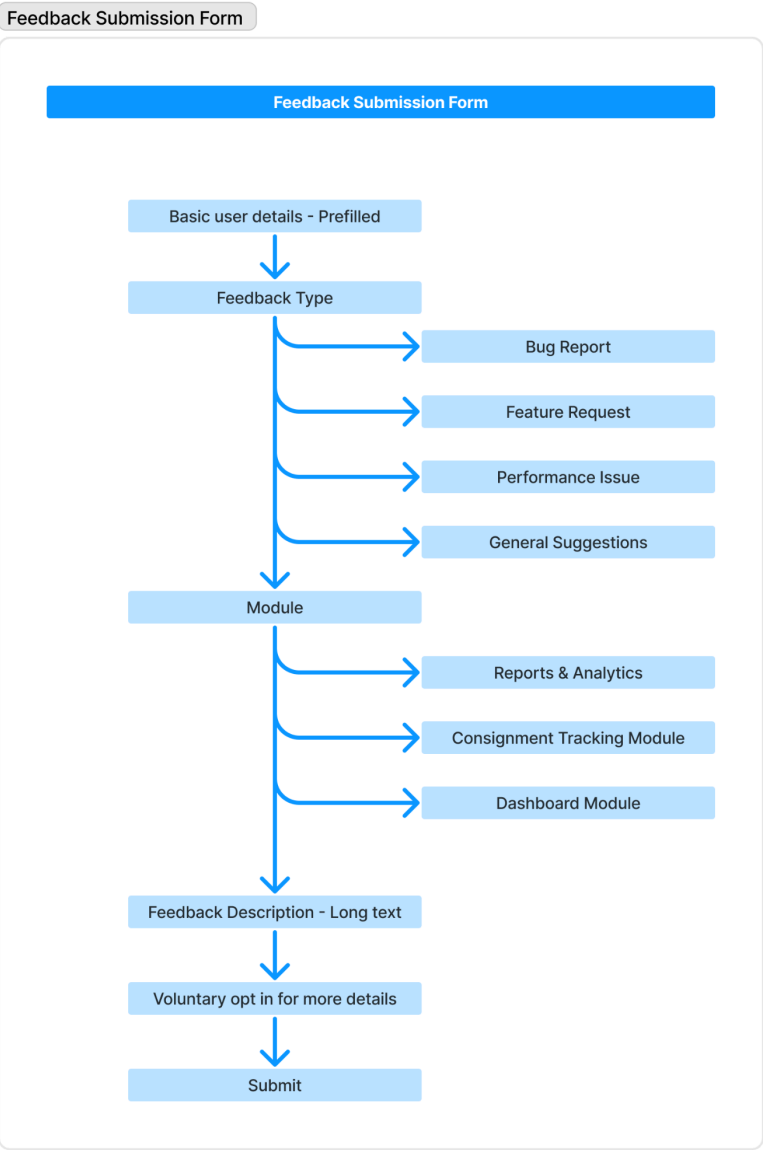

Process Flow:

1. The user feels that there should be some improvement in the product and wants to convey the same to the Freight Tiger through the portal itself.
2. The user clicks on the **Submit Feedback button** available at the button or left side menu.
3. The user is then redirected to the **Feedback Submission Form Page**.
4. The form requires 4 inputs from the user:
 - a. **Feedback Type Dropdown** (Mandatory):
 - i. Bug Report
 - ii. Feature Request
 - iii. Performance Issue
 - iv. General Suggestion
 - v. Praise
 - b. **Module Dropdown** (Optional):
 - i. Dashboard
 - ii. Consignment Tracking
 - iii. Reports & Analytics
 - c. **Feedback detailed description Long text** (Mandatory)
 - d. Voluntary Opt-In check box to participate in user interview regarding feedback
5. The **user submits the Feedback form** which will be redirected to the acknowledgement page.
6. Once the feedback is submitted, the **user will also receive an email of acknowledgement**.
7. The submitted review will be received at the **Feedback Collection Internal Portal** available to internal team members of Freight Tiger.
8. The Feedback is segregated and assigned to designated teams based on type:
 - a. Bug Report - Engineering Team
 - b. Feature Request - Product Team
 - c. Performance Issue - Engineering Team
 - d. General Suggestion - Operations Team

- e. Praise - Product Team
- 9. When the Feedback is assigned to a designated team, the respective **POC will receive an email & in-app notification.**
- 10. Feedback Collection Internal Portal shows a summary which consists of:
 - a. Type Wise Feedback Received
 - b. Module Wise Feedback received
 - c. Team Wise Feedback Received
- 11. **The feedback can be prioritized based on this summary along with some parameters:**
 - a. Bug Reports
 - b. Operations Team
 - c. Feedback can also be prioritized based on **prioritization frameworks like RICE, Impact & Effort Matrix.**
- 12. Based on the summary, respective POC can prioritise Feedback for further improvements in SPO or Roadmap.

Success Metrics:

1. Number of feedback received in a month

- a. This will be the L1 metric for the Feedback System since our main aim is to get feedback from our users.

2. Number of feedback resolved or implemented

- a. Based on prioritization suggested by system and manual efforts

Additional:

1. The Feedback System can also be improvised with further integrations with API for review platforms like G2, and Capterra to get more feedback from users.
2. The Feedback system can also be added with forums, where users can upvote for already submitted feedback. This will make us validate feedback with other users.
3. The feedback system can be integrated with the support ticket system to create tickets which can be easier to handle with both the user & internal team.
4. To gather more feedback, we can also send emails to users with a link to the Feedback Submission Page.
5. In addition to this process, the operations team should be able to add feedback directly from the internal portal.

Thank you.
