Prototype

[Detailed Mockup Link](#)

Improving user experience

Objective

Analyze current health issues

Solution

Chat-bot for getting initial health issue inputs from user

Impact

Patients experiencing shame in answering real, intimate health questions can share issues easily

Implementation

Need to understand patient problems with a proper flow of questionnaire

Objective

Keep track of your plan

Solution

Plan tracker, rewards, notification alerts on diet, exercise time, rewards for proper plan follow

Impact

Patients who forget to follow plan will be able to follow properly

Implementation

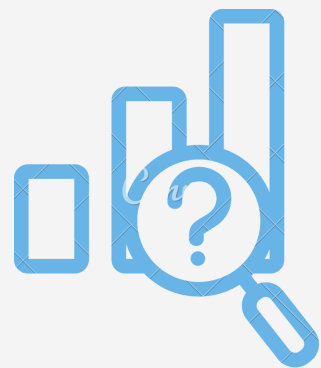

Easy to implement with engineering and design teams

Product Metrics

	User Growth	User Engagement	User Drop Out	Cash Flow
Top Priority	Installs	Freqn of plans followed Doctor consultations	Weekly churn rate, Users with goal achieved	Weekly revenue
Medium Priority	Number of users	Resources blogs views, Video views	Avg user lifetime	Commision medical tests & dignosis
Low Priority	App size, installation time			

North Star Metric

Number of plans purchased
which is directly related to revenue generated

Rolling out the App

- As there are multiple features suggested for the app, we need to check for a simplified user experience.
- We can follow **prioritization framework** for deciding features.
- We can try rolling out other healthcare plans like Covid Care, Pregnancy Care.

Suggested ways:

1. A/B Testing
2. Beta version
