

Product Requirements Document - MyDoctor

Product - MyDoctor

Doctors can create one-page websites to boost their clinic's presence on the web with MyDoctor's easy-to-use templates, online booking system & integrated SEO.

A] Purpose of MyDoctor

Problems & Assumptions for Patients

1. The traditional way of visiting a doctor & waiting in a queue often becomes difficult for patients.
2. With more people seeking the convenience of pre-scheduling doctor appointments, it becomes more hectic when finding the right doctor for consultation.
3. There are so many mobile app platforms to get doctor appointments, which again becomes a task to download & try multiple apps.
4. Many times the health information available on the internet is not very accurate & reliable.

Problems & Assumptions for Doctors

1. Doctors are often busy with OPD & have very less time to work on marketing activities.
2. It becomes a hectic job for clinics/doctors to manage queues during rush hours of OPD.
3. Unable to keep a track of patient history & proper follow-ups.
4. Online consultation apps charge higher fees from patients in the name of platform charges, ultimately doctors are getting paid less.
5. Doctors' profile sticks limited to the mobile app, hence very limited web presence.

User persona

Doctor

Dr. Yash, MBBS is practising in Pune. He started his practice & set up a small clinic in Pune 2 months back & looking for scaling clinic reach. Dr. Yash often writes about health tips & posts multiple videos on health awareness on social media.

Needs

- Wants to reach more patients in the nearby region
- Wants to use tech to simplify daily OPD
- He regularly gets calls, which he wants to manage in simplified way

Pains

Since Dr Yash started 2 months back, he doesn't have enough funds to manage a dedicated support staff to get follow up with patients. He is the only person who does all the necessary things in daily OPD like consultation, patient follow-ups, etc.

Patient

Riya, 26 years is an SDE who works at MNC in Pune. She recently moves to Pune, and don't know much about the surrounding.

Needs

She wants to consult a doctor for her health issue

Pains

She is unable to find time to visit a doctor due to her daily office schedule.

Competitors

Practo:

Practo offers a web-based platform which benefits both patients and doctors. Practo search enables patients to browse through doctor profiles online and book confirmed appointments.

Healthians:

Healthians has created tech-enabled processes that ensure that the customer's entire journey from booking to report delivery is seamless and simplified.

MFine:

MFine is **an on-demand, digital primary healthcare platform** which offers professional diagnostics and health check-up services that can be availed from the comfort of a home, office, or even a spa.

Apollo247

Apollo 24|7 is the platform for online consultation, diagnostic, and pharmacy apps that give you access to a host of medical and healthcare services via a single platform.

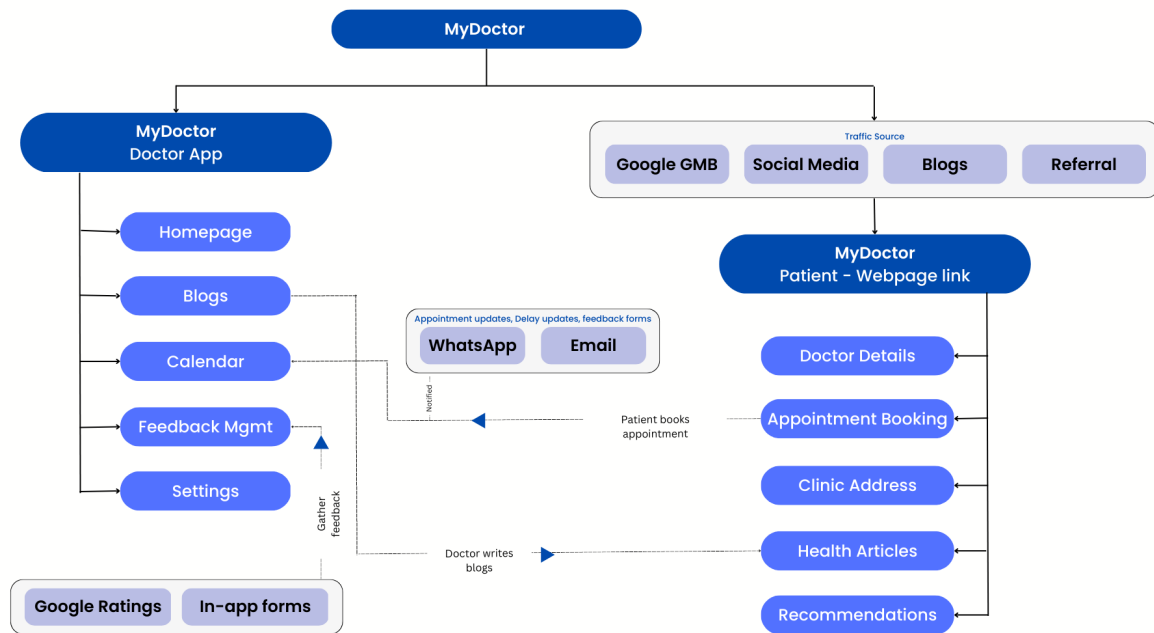

Unique Selling Proposition of MyDcotor:

1. Easy to set up a one-page website
2. No tech understanding required
3. No need to install any mobile app for patients
4. Works on both mobile & web app platforms
5. Promote clinic presence through integrated Google SEO & GMB
6. Multiple traffic sources - can be used on multiple platform as appointment link - GMB, Social Media, WhatsApp Business Account
7. Keep a track of success through analytics features
8. Appointment delay reminders to patients
9. Automated Followup reminders to improve retention

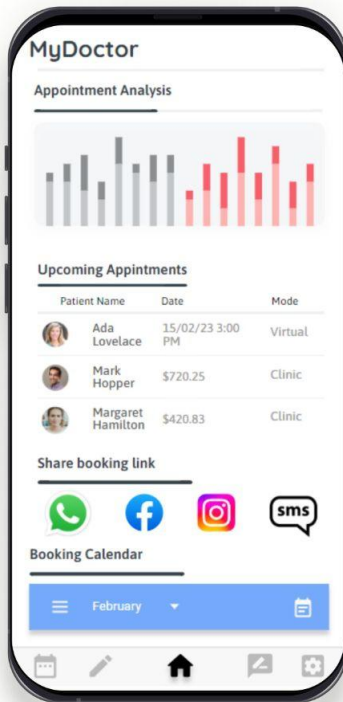

B] Product Features

2. Sharable weblink
3. **Appointment booking** - physical & virtual
4. **Blogs** - Health articles & patient stories
5. **Feedback Management** - Patient feedback & recommendations
6. **Patient communication** - WhatsApp & SMS integrations

Complete Product Flow Diagram

1. Homepage

Doctors can view all insights and summaries on the homepage of the mobile app, which includes Appointment Summary, Upcoming appointments, a quick option to share web links through messaging channels, and a link to the access booking calendar.

There is a total of 5 tabs including the homepage.

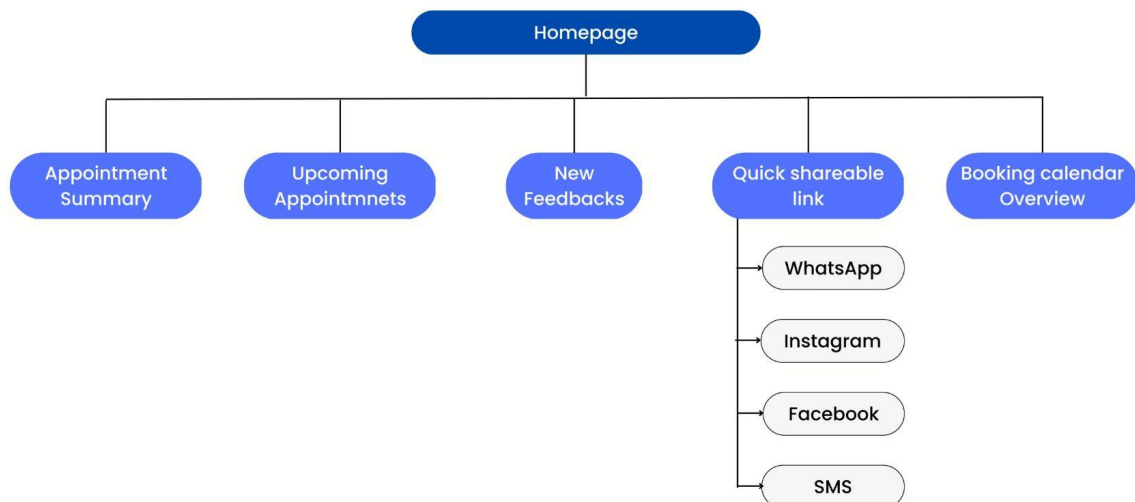

1. Calendar - Doctors can set their calendar preferences through the calendar & can view all appointments.

2. Blogs - Doctors can write health articles & patient success stories which will be displayed on the webpage.

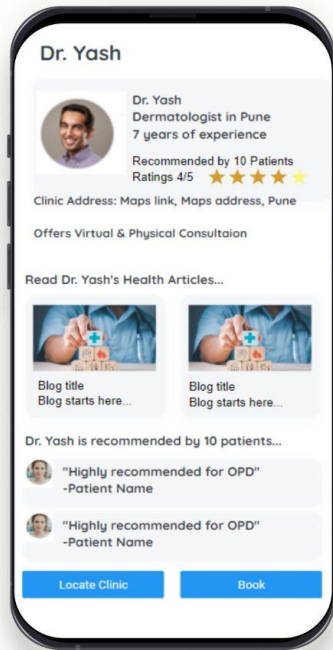

3. Feedback - Doctors can manage feedback & ratings and can share feedback forms from this tab.

4. Settings - Doctors can update their all information & can change the webpage template.

Product Flow:

2. Sharable weblink

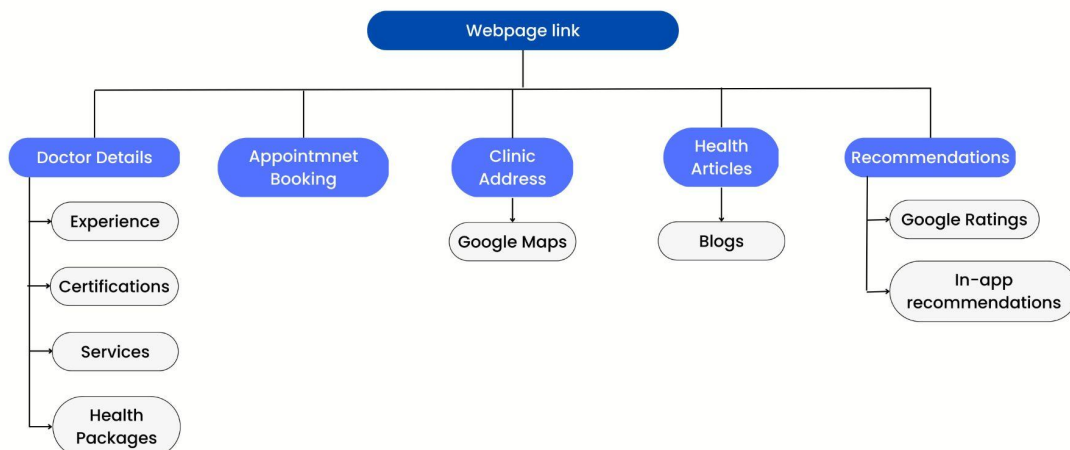

With easy-to-use website templates, doctors can create one-page websites for their clinics. Weblink has important sections like professional information, consulting fee, booking preferences, clinic details, health articles blogs, feedback & ratings, and health packages.

Once done with adding all details in the app, doctors will get a shareable weblink, which they can use as a booking/appointment link to their social media, GMB bookings, and WhatsApp business accounts and also share as a direct message on messaging apps.

This shareable link has health article content which will be useful for google SEO to rank doctor's profile on top searches.

Product Flow

3. Appointment booking - physical & virtual

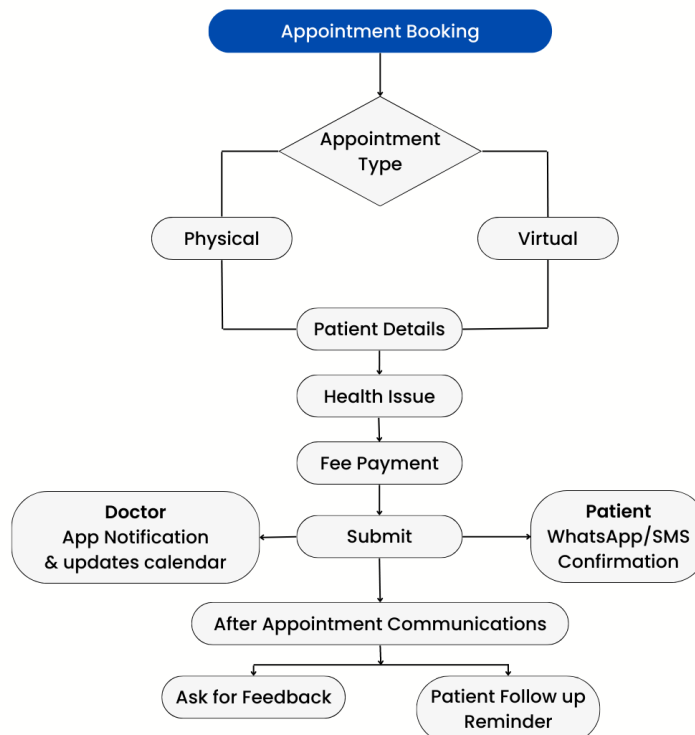

The screenshot shows a mobile app interface titled "Book an appointment". It has two tabs: "Virtual" (selected) and "Physical". The form includes the following fields:

- Full Name**: Name
- Email**: test@gmail.com
- Preferred Time Slot**: DD/MM/YYYY HH:MM
- WhatsApp Number**: 9999999999
- Health Issue**: Health Issue...
- Referred By**: Name

A red "Book Appointment" button is at the bottom.

Patients can book Virtual or Physical clinic doctor's appointments by adding details like name, WhatsApp number for updates, email, health issue & a preferred date & time slot from doctors' calendars on the webpage. Based on the details & time slot selected, the patient will get automated WhatsApp messages for reminders. Also in case of appointment delays, doctors can also send notifications through the app via WhatsApp & SMS.

Product Flow:

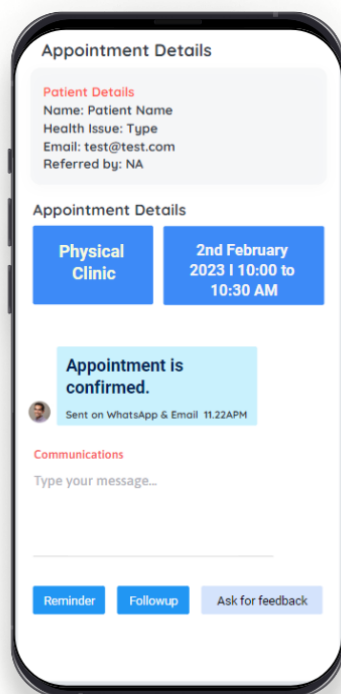

4. Blog - Health articles & patient stories

Doctors can write health articles, health tips & patient stories through the Blogs module on the mobile app. This blog's content will be useful for doctors to build an online presence on Google through effective SEO to boost marketing.

5. Feedback Management - Patient feedback & recommendations

After patient consultation, doctors can send feedback forms to patients via communication channels like WhatsApp to get more valuable feedback which will be useful on the webpage to promote ratings. Also, this can be integrated with GMB to get more reviews & ratings to ultimately boost marketing.

6. Patient communication - WhatsApp & SMS integrations

All the doctor-patient communications can be done through WhatsApp, SMS & email details provided by the patient while appointment booking. Updates for appointment confirmation, reminders, and delays if any, follow-up messages are communicated through the mobile app.

Also, feedback and rating forms can be shared through automated WhatsApp communications.

Doctors can communicate through patient profiles created in the app.

Doctors can set a follow-up reminder as 3-5 days, automated messages can be sent for followups.

C] Success Metrics

The success of the MyDoctor mobile app is dependent on usage by both Doctors & Patients. Pricing strategy can be decided based on subscription basis and/or commission based on payment.

North Star Metric: # of bookings made from weblink

This metric is directly linked to revenue, as MyDoctor can charge on the basis of payment commission & which also it reflects the usage by both doctors & patients.

Level 1 Metrics:

1. # of Doctors onboarded
2. # of Patients visits on weblink

Level 2 Metrics

1. # of blogs written
2. # of >4 star ratings per doctor
3. # of follow-up appointments
