Odoo USP

Open-source

Odoo is an open-source software, which means it is free to use, modify, and distribute. This makes it more affordable than other ERP Workflows, and businesses can customize it to meet their specific needs.

User-friendly interface

Odoo has a modern and intuitive interface that is easy to use and navigate. This makes it more accessible for employees who may not have a technical background.

Modular approach

Odoo follows a modular approach, which means businesses can choose which modules to implement, depending on their requirements. This makes it more flexible than other ERP Workflows that offer a one-size-fits-all approach.

Active community

Odoo has a large and active community of developers and users who contribute to its development and support. This ensures that the software is continually updated and improved, and businesses can benefit from new features and bug fixes.

Ability to add product/service from catalogue in deal in Odoo CRM

This feature will allow users to directly add products or services from the catalogue to an opportunity in Odoo CRM. It integrates the product catalogue with the deal management interface, enabling seamless selection and inclusion of products or services in the deal details.

Why

By directly linking products or services to deals, the feature ensures that the deal size and **expected revenue are accurately calculated based on the selected products**, providing more reliable forecasting and financial planning.

It improves product visibility within the CRM, allowing sales teams to easily browse and select items from the catalogue, ensuring they are fully aware of the available offerings..

Current Workflow

Currently, in Odoo CRM the salesperson can only add Expected Revenue in numbers. The ability to add products/services from catalogues is available only when creating a quotation for the lead.

The screenshot displays the Odoo CRM interface for a deal titled 'Need 20 Days of Consultancy'. The top navigation bar includes 'CRM', 'Sales', 'Reporting', and 'Configuration'. Below this, there are tabs for 'New', 'Pipeline', 'Need 20 Days of Consultancy', 'No Meeting', 'Quotations', and 'Similar Leads'. The main content area shows a 'New Quotation' button and a 'Won' button. The deal title 'Need 20 Days of Consultancy' is prominently displayed. Below the title, there is a table with columns 'Products/Service' and 'Probability'. The 'Products/Service' column has a multi-select dropdown menu with 'Consultancy' selected. The 'Probability' column shows 'at 50.00 %'. Other fields include 'Customer' (ONE Media), 'Email' (bhosalepatil@hotmail.com), 'Phone', 'Salesperson' (Shubham Bhosale), 'Expected Closing', and 'Tags'. There are also buttons for 'Internal Notes' and 'Extra Information'.

Users can select products/services from the product catalogue with multi-select dropdown.

Ability to prioritize and manage projects with Sprint Management in Odoo Projects

This feature will allow teams to break down their projects into manageable, time-boxed iterations called sprints. Each sprint includes a set of tasks that the team commits to completing within the sprint period, typically 1-4 weeks.

Why

This feature integrates agile project management methodologies into Odoo Projects, enabling better planning, execution, and tracking of project work.

With an ability to create, manage and close a Sprint, development teams can work efficiently as per sprint planning.

Current Workflow

Currently, in Odoo Projects we can add priority to the individual tasks. It also has some third-party integrations available.

Sprint 1

Closed

1 April to 22 April

Focused on bug fixes before product launch

Sprint 1

Open

1 May to 22 May

Focused on bug fixes before product launch

Users can create, manage and close sprints as the tasks are prioritized.

Ability to create recurring projects with a set of defined tasks in Odoo Projects

This feature allows users to create recurring projects in Odoo Projects, each with a predefined set of tasks. Users can define a template with all necessary tasks, deadlines and resource allocations, which can then be scheduled to recur at specified intervals.

Why

There are industries such as Accounting where Chartered Accounting firms need to work on **recurring projects every month, quarter**, etc.

Projects such as GST Filing, TDS Filing, and ITR Filing have a definite period of recurrence. Each project has a **defined set of tasks** that the user needs to complete.

Admin need to monitor each project individually.

Current Workflow

Currently, in Odoo Projects we can create recurring tasks - Auto-generate tasks for regular activities, which can be created inside a single project. But we cannot recur an entire project.

Project Template

Task 1

Task 2

Task 3

Automation

Every Month

On 2nd day

Assign to SB

User can use a pre-defined project template to create a recurring project which has multiple tasks inside it with a fixed rule of recurrence.

Ability to create Closed stage in Odoo Projects

The Closed stage in Odoo Projects is the final stage in the project workflow where tasks in a project are marked as completed. This stage signifies the conclusion of all work and indicates that the deliverables have been finalized and accepted.

Why

There should be an **endpoint of a project where tasks are marked as closed like a Deal is Won or Lost in Odoo CRM** to ensure that tasks are systematically progressed to completion.

This will allow **accurate tracking and reporting on completed tasks** and projects, facilitating better analysis of project performance and resource utilization.

Current Workflow

Currently, in Odoo Projects we can have multiple stages which are essentially meant for the closed status of the tasks. But multiple stages can be created, giving and incorrect tracking on progress or completion.

The user can create multiple Active stages but the Closed stage will be only one, which closes the task and marks it as completed.

Ability to create support ticket from comment, direct message in Odoo Social Marketing

This feature enables users to automatically create support tickets from comments and direct messages (DMs) received on social media platforms directly within Odoo Social Marketing. It integrates social media interactions with the Odoo Helpdesk, ensuring that customer inquiries and issues are promptly addressed.

Why

With increasing social media usage, brands focus on staying active on social media platforms. Along with support platforms, customers now prefer to express their concerns issues and feedback about the brand and associated products or services on social media.

This needs a proper integration of social media marketing and customer support teams to handle customer issues promptly.

Current Workflow

Odoo Social Marketing platform allows seamless integration with CRM to create leads directly from the comments received on social media platforms. Creating an additional layer of integration with Odoo Helpdesk and mapping with Comments & Direct Message would solve this problem.

Users can directly create a support ticket from a comment on a post from the Odoo Social Marketing platform, which can be viewed and resolved in Odoo Helpdesk by the support team.

Thank you!
