| What is Route Optimisation?

Route optimization is the process of determining the most cost-efficient route. It's more complex than simply finding the shortest path between two points.

What is the Optimal Route?

Considering road transport, roads are not in straight lines and come with traffic, bridges, tunnels, tolls, one-way sections, speed limits, parking restrictions, and many other factors that affect how suitable they are for travelling and stopping.

How route optimisation is done?

It serves as both an **Economical & Ecological** way of transportation. The shortest route is not the optimal route. It depends on factors such as:

- Take the least time
- Uses the smallest number of vehicles
- Costs the least money
- Minimizes fuel use or carbon emissions
- Covers the shortest distance.
- Delivery time windows
- Vehicle capacities
- Available Vehicle types
- Driver schedules

Route optimization is a good example of how solving abstract mathematical problems can have real-world benefits. In this case, the two most famous are the **Traveling Salesman Problem (TSP)** and the **Vehicle Routing Problem (VRP)**. These are complex problems that mathematicians and computer scientists have been trying to solve for years.

Why use route optimisation?

The rising cost of fuel around the world is forcing logistics and distribution companies to find ways to reduce overall costs. While most companies have found ways to decrease packaging costs, warehousing costs and administration costs, transportation costs still remain a challenge. Route optimization works as a key for success since it helps businesses to not only complete orders but to also do so while effectively incorporating factors like driver schedules, available hours, total stops, fulfillment estimates, and legal requirements. It is important to point out here that route optimization is **not about finding the quickest or the cheapest route, it is instead about finding a route that is efficient and satisfactory** for all variables involved.

Benefits of Route Optimisation

Saving time and productivity on planning:

Manual Route planning is a complex task. Using a route optimization solution saves the planner many hours by automating tasks. This boosts productivity in terms of time efficiency & higher success.

Cost reduction :

Optimized routes allow a better distribution of resources such as drivers, vehicles, and fuels and minimization of their use, resulting in a reduction in operational costs.

Reduced environmental impact:

By reducing the number of vehicles used, the distance travelled and their journeys out of charge, route optimization makes it possible to reduce the ecological footprint of the transport activity, which emits a large amount of CO2.

Improvement of the quality of service:

Route optimization makes it possible to respect the commitments made to customers, in particular, the delivery time windows, for a better quality of service. The optimization in real-time makes it possible to track the routes and to detect the vagaries impacting the delivery times in order to be able to inform the customer and to take corrective measures on the routes in progress.

Improvement of the working conditions of drivers:

In addition to generating less stressful routes for drivers, route optimization solutions make it possible to configure their working and rest hours in order to comply with compensation policies, thereby improving their working conditions.

Market Research

Market Statistics

13.56% CAGR

\$33.840 million
market size 2020

\$82.422 million
exp. market size 2027

The highest growth for the route optimisation software market can be seen in Asia-Pacific markets. The Indian market for route optimization is projected to witness exponential growth, majorly owing to the **large e-commerce growth** in the country because of increased internet and smartphone penetration.

Can be categorised as

- Service - *API*
- Software - *Cloud or on-premise application*

Industries served

- FMCG & Retail Goods
- Food Delivery
- Ride-Hailing Services
- E-commerce
- Field Services
- Logistics
- Healthcare & Pharmaceuticals

Growth Factors

- **Government policies** on logistics and warehouses are driving the market growth of the route optimization software market in India.
- **Major investments** in the e-commerce and logistics sectors are prominent factors in propelling overall growth.
- **Increase in the number of orders** for products and services placed online per day.
- Vendors trying to **reduce transportation costs** to maximize their profits as the volume of orders they are receiving is increasing day by day.
- **A surge in demand for online cab booking** services as more users are adopting ride-hailing services in India. Also, sharing-based cab service demand is rising, which needs efficient planning for on-time passengers pick-up and drop.
- The cost-related benefits, real-time tracking through GPS, optimization of distances, delivery without wastage of time along with less fuel consumption are driving the growth of Route Optimization Software Market.

Competitor Analysis

Smart Route Planner for all your Routing Needs

Route planning made easy. Optimize your resource planning by delivering the fastest and shortest route possible

Features

- Dynamic Route Modification
- Vehicle-Based Optimization
- One-Click Route Sharing
- API Integration
- Advanced Route Settings
- Multi-Stop Route Planner
- Automatic Task Allocation

Price

\$0.10 per stop per month

Intelligent Delivery Planning To Boost Customer Experience

Features

- Vehicle Capacity Management
- Intelligent Route Planning
- Complete Visibility To Customers
- API Integration
- Load planning

Price

As per business requirement

Competitor Analysis

ENJOY FASTER MORE COST-EFFICIENT ROUTES

Features

- REALTIME ROUTE MODIFICATION
- Aurate ETA based on real-time data
- Combined Stop and Shipment Optimisation
- API Integration
- Skills Consideration
- Capacity Consideration
- Item Scanning

Price

As per business requirement

Opti-Time Toursolver

Route optimization for sales teams, delivery teams or field force

Features

- Balanced work load to delivery partners using territory management
- In-built mini-CRM
- Customer satisfaction survey's
- API Integration

Price

Starts at ₹ 1,280 per month / vehicle

Competitor Analysis

UNLOCK EFFICIENCY AT SCALE WITH ROUTE OPTIMIZATION SOFTWARE

Features

- Autonomous & Supervised route optimisation
- Intelligent clubbing of orders
- Vehicle allocation
- Geocoding engine for improved on-time delivery rates
- API Integration
- Scheduled & On-demand dispatch planning

Price

As per business requirement

Opti-Time Toursolver

Route optimization for sales teams (beat), delivery teams or field force

Features

- Routes based on user-specified origins, waypoints and destinations
- Accurate information on turn-by-turn driving directions, distance & estimated drive times
- Easy customization
- API Integration

Price

As per business requirement

Competitor Analysis

Optimize Your Daily Delivery Routes & Save Up To 40% on Fuel Costs

Features

- Plan up to 500 Stops for 25 Drivers At Once
- Optimize Stops for Time or Distance
- Set Urgency for Priority Stops on Your Routes
- Add Driving Preferences
- API Integration
- Add Delivery Constraints
- Consider Driver Location & Break Time

Price

\$31.99 per driver/month

To increase route efficiency and reduce time in consignment delivery for the logistics industry.

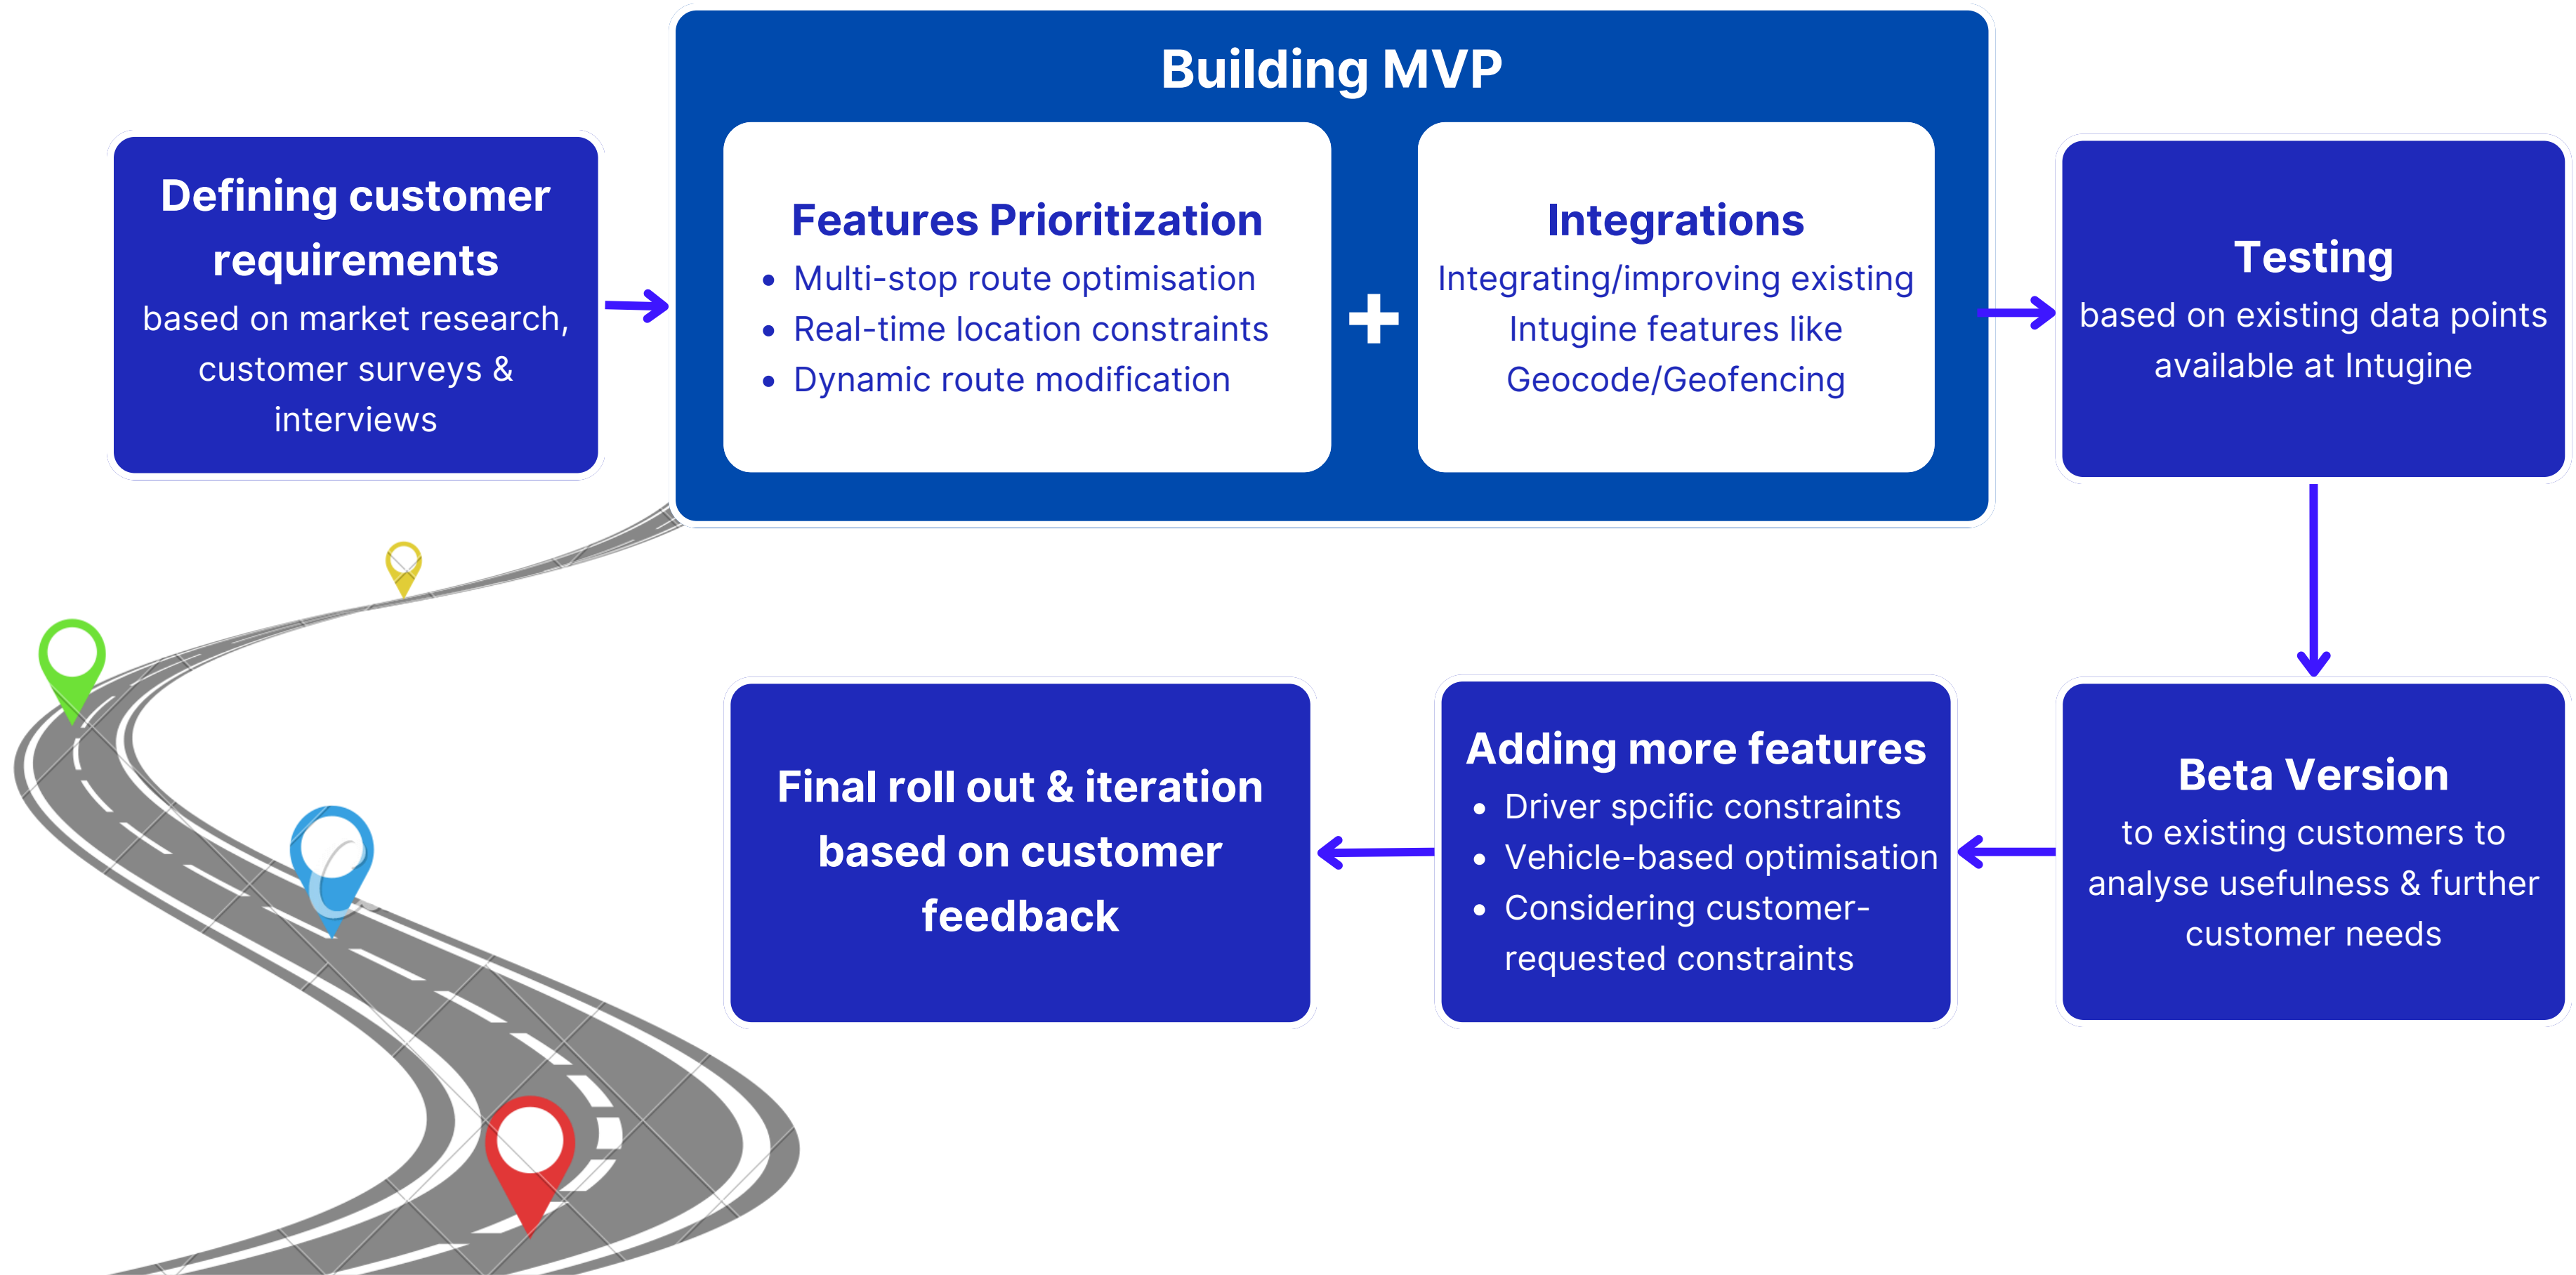

Features

- Multi-stop routes using the route optimization software without much effort and time
- advanced routing software
- Real-life considerations such as driver lunch/dinner breaks, sick issues (if any), and parking/toll delays

Price

As per business requirement

Intugine Route Optimisation - Product Roadmap

| Intugine Route Optimisation - GTM

| Value Proposition

- Effortless real-time route optimisation
- Best for multi-stop route optimisation
- Dynamic route optimisation for last-mile modifications
- Real-time location constraints

| Product Positioning

Efficient route optimisation software with complete Unified Logistics Interface Platform (ULIP)

| Product Messaging

"Save fuel for your next shipment with Intugine's intelligent route optimisation"

"Last-mile delivery modification? Handle efficiently with real-time route optimisation"
